

ABDUL KHADAR JILANI

Gudivada | jilaniabdulgec@gmail.com | 7416559466 | in abdulkhadarjilani | Abdul-Khadar-Jilani

EXPERIENCE

- Eruvaka Technologies | Data Analyst InternSep 2024 - Present
- Developed ETL pipelines by collecting and transforming large-scale IoT data from APIs, ensuring efficient data integration into BigQuery for advanced analytics.
 - Optimized query performance by writing complex SQL scripts in BigQuery, reducing data processing time by 30% and improving system efficiency.
 - Designed interactive dashboards in Power BI and Looker Studio, visualizing key aquaculture metrics such as pond conditions and survival rates, improving real-time decision making and early detection of issues by 15%.
- SmartInternz | Machine Learning and Deep Learning InternJan 2023 - May 2023
- Applied machine learning and deep learning algorithms, including classification and regression models, to solve real-world challenges, contributing to an improvement 20% in predictive accuracy for critical business processes.
 - Specialized in applying advanced supervised and unsupervised learning techniques, achieving a 92% accuracy rate in face and object recognition tasks.
 - Improved and fine-tuned deep learning architectures (CNNs, RNNs), improving model performance and robustness by 15% in various recognition tasks.

EDUCATION

- Bachelor of Technology, Artificial Intelligence and Data Science2020 - 2024
- Seshadri Rao Gudlavalleru Engineering College, GudlavalleruCGPA: 8.98/10.00
- Intermediate2018 - 2020
- Sri Chaitanya Junior College, GudivadaCGPA: 9.65/10.00

SKILLS

- Programming Languages: Python, JavaScript
- Web Technologies: HTML 5, CSS 3, PHP, Bootstrap 5, JavaScript, MySQL
- Data Analytics and Visualization: Microsoft Power BI, Looker Studio, Google BigQuery, Python, SQL, Excel
- Tools and APIs: Git, GitHub, VS Code, Postman, Docker, Huggingface, LLMs, GenAI APIs
- Frameworks and Libraries: Django, Flask, Pandas, TensorFlow, PyTorch, Langchain
- Coursework: Data Structures, Algorithms, OOPs, Artificial Intelligence, Machine Learning, Big Data

PROJECTS

- GenAI Chat with PDFPython, Langchain, Huggingface, LLMs, Retrieval-Augmented Generation (RAG).
- Implemented Retrieval-Augmented Generation (RAG) with LLMs to enable accurate, context-aware responses to queries on PDF documents, improving information retrieval efficiency.
 - Enhanced user experience by integrating conversational AI with efficient document processing, ensuring seamless interaction and structured knowledge extraction.
 - Deployed AI-powered chatbot on Hugging Face Spaces and Streamlit Cloud, allowing scalable and real-time access to document-based insights.
- GenAI-DBManager powered by Gemini APIPython, SQLite, Streamlit, Gemini API
- Implemented Text-to-SQL Query Functionality: Introduced a conversational AI-driven SQL querying interface on Streamlit platform, enabling seamless retrieval of database results; improved user satisfaction by cutting average query execution time by 25% through real-time generation.
 - Integrated Full CRUD Operations: Created a interface enabling users to add, modify, and delete records directly in the database, ensuring efficient and real time data management.
 - Boosted SQL accessibility by 20% for non-technical users, simplifying data exploration and query generation.
- AI-Driven Predictive Drug Recommendation SystemPython, NLTK, Scikit-Learn, TF-IDF, HTML, CSS
- Utilized Natural Language Processing (NLP) and Machine Learning techniques to develop a highly accurate drug recommendation system, achieving an exceptional 96% accuracy rate.
 - Applied advanced NLP techniques including stemming, lemmatization, and vectorization (TF-IDF, BoW) to preprocess and analyze patient data, improve text representation, and increase predictive model precision by 30%.
 - Implemented an intuitive user interface for symptom input and customer/patient reviews, leading to a 25% increase in user engagement.
