SUMMARY

Data Analyst with hands-on experience in building scalable ETL pipelines, analyzing large-scale IoT data, and delivering insights using BigQuery, SQL, and Power BI. Proven ability to optimize queries, design star schemas, and automate data ingestion workflows. Experience in stakeholder-facing dashboards and performance optimization. Strong Python and SQL background with exposure to cloud-based analytics.

EXPERIENCE

- Eruvaka Technologies | Data AnalystSep 2024 - Present
- Designed and implemented automated ETL pipelines to ingest large-scale IoT data from authenticated REST APIs into Google BigQuery.
 - Modeled analytical datasets using star schema design to support reporting and BI use cases.
 - Optimized BigQuery SQL queries using partitioning and clustering, reducing query execution time by 30%.
 - Built production dashboards in Power BI to monitor aquaculture KPIs, allowing 15% faster issue detection.

EDUCATION

- Bachelor of Technology, Artificial Intelligence and Data Science2020 - 2024
- Seshadri Rao Gudlavalleru Engineering College, GudlavalleruCGPA: 8.98/10.00
- Intermediate2018 - 2020
- Sri Chaitanya Junior College, GudivadaCGPA: 9.65/10.00

TECHNICAL SKILLS

- Programming:** Python, SQL, PySpark
- Data & Analytics:** BigQuery, Power BI, Looker Studio, Tableau, Databricks, Excel, Pandas
- Databases:** MySQL, SQLite
- AI / ML:** Machine Learning, Deep Learning, NLP, LangChain, LangGraph, Crew AI, Hugging Face, LLMs
- Frameworks:** Flask, Django, Streamlit
- Tools:** Git, GitHub, Docker, VS Code, Postman

PROJECTS

- IoT Data Analytics & Dashboarding PipelinePython, REST APIs, BigQuery, SQL, Power BI, Looker Studio
- Engineered an end-to-end analytics pipeline ingesting large-scale IoT data from multiple REST APIs into Google BigQuery.
 - Executed data cleaning, transformation, and enrichment processes on raw datasets using Python and SQL for reporting readiness.
 - Structured analytical tables to track multiple KPIs and support trend analysis across time-based dimensions.
 - Delivered interactive Power BI and Looker Studio dashboards used for ongoing monitoring of operational metrics.
- Natural Language to SQL Analytics ApplicationPython, SQLite, Streamlit, LLM API
- Designed a Natural Language to SQL analytics application enabling non-technical users to query structured databases using plain English.
 - Implemented LLM-driven SQL generation to support analytical queries including filtering, aggregations, and multi-table joins.
 - Engineered backend logic to execute dynamically generated SQL queries and return structured datasets for analysis.
 - Reduced manual SQL dependency for business users by approximately 25%, improving self-service analytics capability.
- Classification Analysis on Healthcare Data (Mpx Detection)Python, Pandas, Scikit-learn, SQL
- Examined healthcare datasets to assess data quality, feature distributions, and class imbalance across target variables.
 - Applied preprocessing techniques including missing value handling, normalization, and feature selection to prepare analytical datasets.
 - Constructed a classification model using gradient descent and evaluated results using accuracy and recall metrics.
 - Analyzed model outputs to identify key features contributing to prediction outcomes.
